

Navigating a brownfield site can feel overwhelming when faced with legal, financial, environmental, land use, and community challenges. But brownfield sites also present an incredible opportunity to transform an underutilized property into something that achieves your goals while also providing benefits like promoting a cleaner, safer environment and providing community services and amenities.

## ABOUT US

Our team here at Stone is committed to leading you through redevelopment, from assessment to cleanup. With decades of experience, our team of scientists, planners, and engineers have the technical expertise to address complex environmental challenges while keeping your end goals in mind. Our team will serve your unique needs and can support you in everything from identifying funding to coordinating across regulatory agencies. Stone is excited to help you achieve your vision and promote community well-being in the process.

## OUR SERVICES

We work with project owners on all aspects of a project including:

- Phase I and II environmental site assessments,
- Brownfield quality assurance project plans,
- BRELLA enrollment,
- Remedial planning, design, and implementation,
- Reuse planning and assessment,
- Interpretation of environmental results,
- Regulatory coordination,
- Community outreach and engagement, and
- Grant funding assistance from local, state, and federal sources.

In addition to brownfield services, our team here at Stone can support your project needs including water quality elements like stormwater assessment and permitting, wastewater solutions, and stormwater design as well as geospatial and data solutions like custom web applications and data visualization. For more details on Stone's areas of expertise, please visit our [website](#).
